

ZymoBIOMICS® Gut Microbiome Standard

- **True to Life:** comprised of 21 different strains to mimic the human gut microbiome
- **Accurate Composition:** allows for benchmarking and validation of NGS microbiome workflows
- **Cross Kingdom Representation:** includes Bacteria, Fungi, and Archaea

Optimize Microbiome Analysis of Gut Samples

The ZymoBIOMICS® Gut Microbiome Standard consists of a mix of hard-to-lyse bacteria, easy-to-lyse bacteria, two yeasts and an archaea species in ratios mimicking the human gut microbiome. The standard was used to compare different DNA extraction protocols. The resulting DNA was profiled using metagenomic shotgun sequencing.
